

Elbow Skin Tear Wound Care

Female, 87 Years of Age

Nature of Wound:

Three day old, 3 by 9 cm tear on her elbow

Start Date: February 1, 2018

End Date: February 21, 2018

Wounds near joints have extreme difficulty healing and marked increased propensity to get infected. This wound would have taken at least two and a half months to heal and would have had a horrible scar. The only wound care maintenance needed using our Miracle Dressing Wound Care System is immersing it in water at least once a day.
